

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

- 5 1 (currently amended): A pointing device comprising:
 a housing comprising:
 an upper cover; and
 two extending arms;
 a main body retractably fixed under the housing, the main body comprising a front
10 half and a back half, wherein the two extending arms of the housing extend
 from the upper cover and have the main body positioned between
 the two extending arms, for fixing the main body under the upper
 cover, and when the main body is under the housing, the front of
15 the two extending arms of the housing is flush with the front of
 the main body; and
 an input section placed on the front half of the main body for generating
 (inputting) key signals, wherein the top surface of the front half
 and the top surface of the back half of the main body join with no
 gap between them forming a smooth surface.
20
 2 (original): The pointing device of claim 1 wherein the bottom side of
 the housing and the bottom side of the main body are fixed at the same
 level.
25 3-4 (cancelled).

 5 (original): The pointing device of claim 1 is a mouse.

 6 (original): The pointing device of claim 1 wherein the input section
30 comprises two keys and a wheel that is placed between the two keys.

7 (original): The pointing device of claim 1 further comprising a guide
and a track that are placed between the housing and the main body in
order to freely change the position of the housing with respect to the
5 main body.

8 (currently amended): The pointing device of claim 1 wherein
the main body further comprises a plurality of notches;
the housing further comprises a latch; and
10 the latch comprises a tooth;
wherein the ~~positions~~ position of the housing with respect to the
main body is fixed by fitting the tooth of the latch ~~fits~~ into the
plurality of notches so that ~~when the latch~~ the tooth of the latch
fits into a corresponding notch from the plurality of notches.

15 9 (withdrawn): The pointing device of claim 1 wherein
the main body further comprises a plurality of notches;
the housing comprises a latch; and
the latch comprises two teeth;
20 wherein the positions of the housing with respect to the main body
is fixed by fitting the two teeth of the latch into corresponding
notches from the plurality of notches.

10 (currently amended): A pointing device comprising:
25 a housing comprising:
a first edge; and
two extending arms;
a main body retractably fixed under the housing and fixed between
the two extending arms of the housing, wherein when the main
30 body is under the housing, the front part of the two extending

5 arms of the housing is flush with the front of the main body,
 wherein a fixed space exists between the first edge of the
 housing and a ~~smooth~~ surface of the main body, the fixed space
 being only large enough for first edge of the housing to slide
10 over the ~~smooth~~ surface of the main body when the positions of
 the housing and main body relative to each other are adjusted;
 an input section placed on the ~~front-half~~ main body and exposed out
 from the housing;
 wherein when the positions of the main body and the housing
15 relative to each other are adjusted, a fixed space exists between the
 first edge and the ~~smooth~~ surface of the main body.

11 (original): The pointing device of claim 10 wherein the bottom side
of the housing and the bottom side of the main body are fixed at the
15 same level.

12-13 (cancelled).

14 (original): The pointing device of claim 10 is a mouse.
20

15 (original): The pointing device of claim 10 wherein the input section
comprises two keys and a wheel that is placed between the two keys.

16 (original): The pointing device of claim 10 further comprising a
25 guide and a track that are placed between the housing and the main body
in order to freely change the position of the housing with respect to the
main body.

17 (currently amended): The pointing device of claim 10 wherein
30 the main body further comprises a plurality of notches;

the housing further comprises a latch; and
the latch comprises a tooth;

5 wherein the ~~positions~~ position of the housing with respect to the
main body is fixed by fitting the tooth of the latch ~~fits into~~ the
plurality of notches so that ~~when the latch~~ the tooth of the latch
fits into a corresponding notch from the plurality of notches.

18 (withdrawn): The pointing device of claim 10 wherein
the main body further comprises a plurality of notches;
10 the housing comprises a latch; and
the latch comprises two teeth;
wherein the positions of the housing with respect to the main body
is fixed by fitting the two teeth of the latch into corresponding
notches from the plurality of notches.

15
19 (currently amended): A pointing device comprising:
a housing comprising:

a first bottom side;
an upper cover; and
20 two extending arms;
a main body comprising a second bottom side and retractably fixed
under the housing, wherein the main body is fixed between the
two extending arms of the housing and under the upper cover,
and when the main body is under the housing, the front of the
25 two extending arms of the housing is flush with the front of the
main body; and

an input section placed on the main body;
wherein the first bottom side and the second bottom side together
form a flat surface, and when the positions of the main body and
30 the housing relative to each other are adjusted, the first bottom

side and the second bottom side continue to form the ~~remain on~~
~~the (same)~~ flat surface.

20-21 (cancelled).

5

22 (original): The pointing device of claim 19 is a mouse.

23 (original): The pointing device of claim 19 wherein the input section
comprises two keys and a wheel that is placed between the two keys.

10

24 (original): The pointing device of claim 19 further comprising a
guide and a track that are placed between the housing and the main body
in order to freely change the position of the housing with respect to the
main body.

15

25 (currently amended): The pointing device of claim 19 wherein
the main body further comprises a plurality of notches;
the housing further comprises a latch; and
the latch comprises a tooth;

20

wherein the ~~positions~~ position of the housing with respect to the
main body is fixed by fitting the tooth of the latch ~~fits~~ into the
plurality of notches so that ~~when the latch~~ the tooth of the latch
fits into a corresponding notch from the plurality of notches.

25

26 (withdrawn): The pointing device of claim 19 wherein
the main body further comprises a plurality of notches;
the housing comprises a latch; and
the latch comprises two teeth;

30

wherein the positions of the housing with respect to the main body
is fixed by fitting the two teeth of the latch into corresponding
